

Installing your new search box!

1. Save the css file (combined-style.css) to the place where the css files for the website are saved.
2. Save the html file (new-search-code.html) to the place where you save custom code.
3. Open new-search-code.html with a code editor.

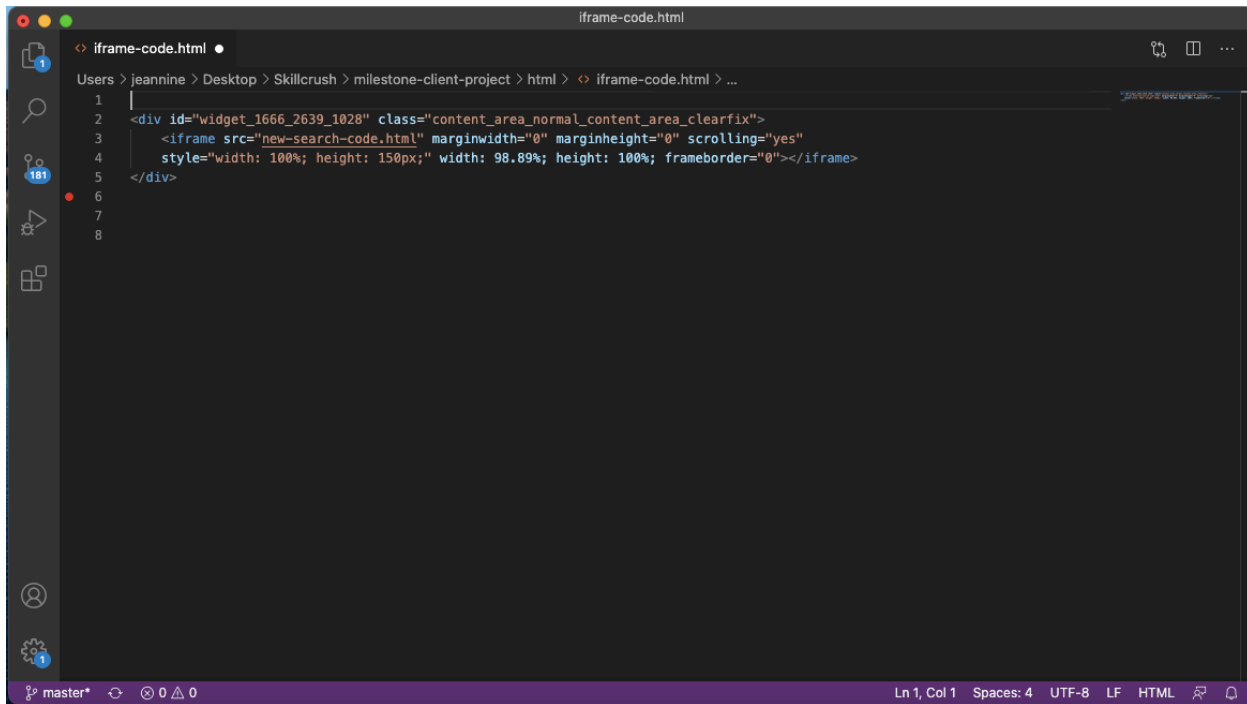

```
1 <html>
2 <head>
3   <link href="../../css/combined-style.css" rel="stylesheet"/>
4 </head>
5 <body>
6   <div class="form-container">
7     <div class="search-box-text">
8       <p class="search-box-p">Find Books, eBooks, Movies, Music and More</p>
9     </div>
10    <div class="search-box-container">
11      <form id="searchForm" name="searchForm" method="get" action="https://sjvls.ent.sirsi.net/client/en_US/default/s">
12        <input type="hidden" name="ln" value="en_US">
13        <input id="q" title="Search For:" maxlength="200" name="q" value="" type="text" placeholder="Keyword, Author or">
14        <input id="searchButton" title="Search the Catalog" value="Search" type="submit">
15      </form>
16    </div>
17    <div class="search-box-text">
18      <p class="search-box-small-p">*To access your account online just click the search button above</p>
19    </div>
20  </div>
21 </body>
22 </html>
```

4. Change the file path for the style sheet linked at the top to reflect where you've saved it. Reminder: ../ in the file path means go back one level. The link to the style sheet is circled below:

```
1 <html>
2 <head>
3   <link href="../../css/combined-style.css" rel="stylesheet"/>
4 </head>
5 <body>
6   <div class="form-container">
7     <div class="search-box-text">
8       <p class="search-box-p">Find Books, eBooks, Movies, Music and More</p>
9     </div>
10    <div class="search-box-container">
11      <form id="searchForm" name="searchForm" method="get" action="https://sjvls.ent.sirsi.net/client/en_US/default/s">
12        <input type="hidden" name="ln" value="en_US">
13        <input id="q" title="Search For:" maxlength="200" name="q" value="" type="text" placeholder="Keyword, Author or">
14        <input id="searchButton" title="Search the Catalog" value="Search" type="submit">
15      </form>
16    </div>
17    <div class="search-box-text">
18      <p class="search-box-small-p">*To access your account online just click the search button above</p>
19    </div>
20  </div>
21 </body>
22 </html>
```

5. Open the html for the main page (where the code for the iframe code lives) with a code editor (this is just a sample of your code, your screen will look different):

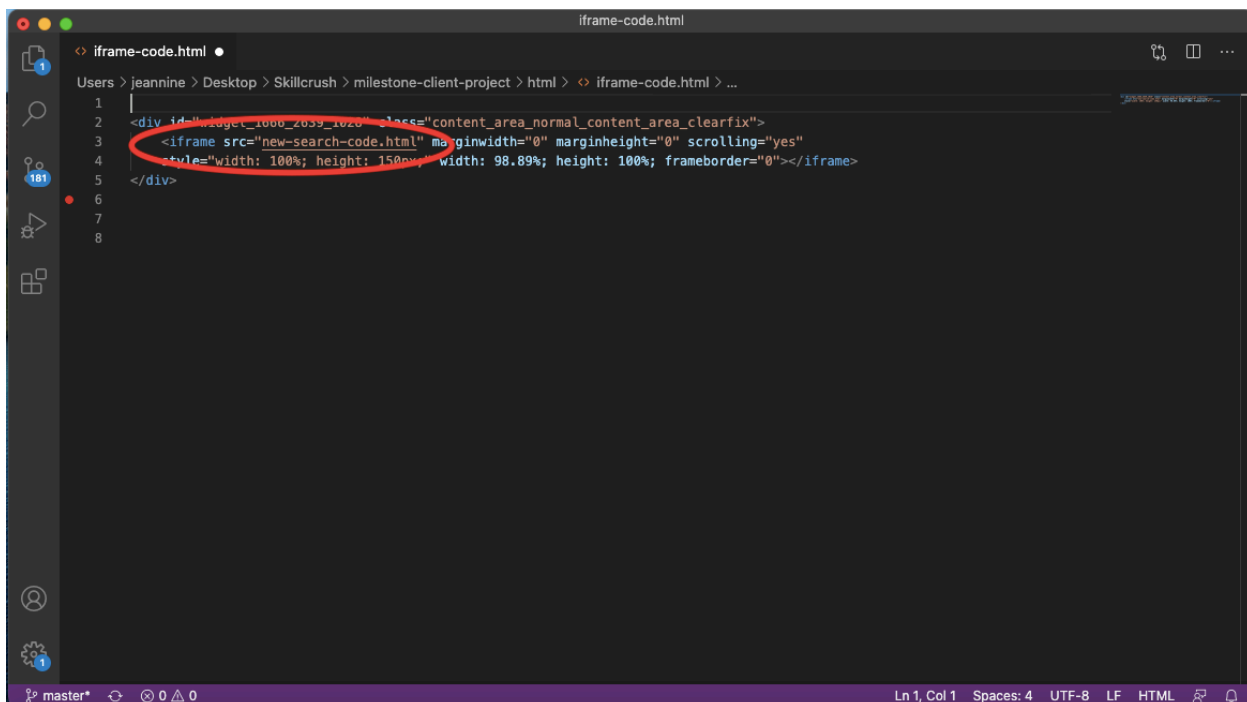

A screenshot of a code editor window titled 'iframe-code.html'. The editor shows the following HTML code:

```
1 <div id="widget_1666_2639_1028" class="content_area_normal_content_area_clearfix">
2   <iframe src="new-search-code.html" marginwidth="0" marginheight="0" scrolling="yes"
3     style="width: 100%; height: 150px; width: 98.89%; height: 100%; frameborder="0"></iframe>
4 </div>
5
6
7
8
```

The status bar at the bottom indicates 'Ln 1, Col 1', 'Spaces: 4', 'UTF-8', 'LF', and 'HTML'.

6. Change the source for the iframe code to reflect where you've saved it. Reminder: ../ in the file path means go back one level. The link to the code is circled below:

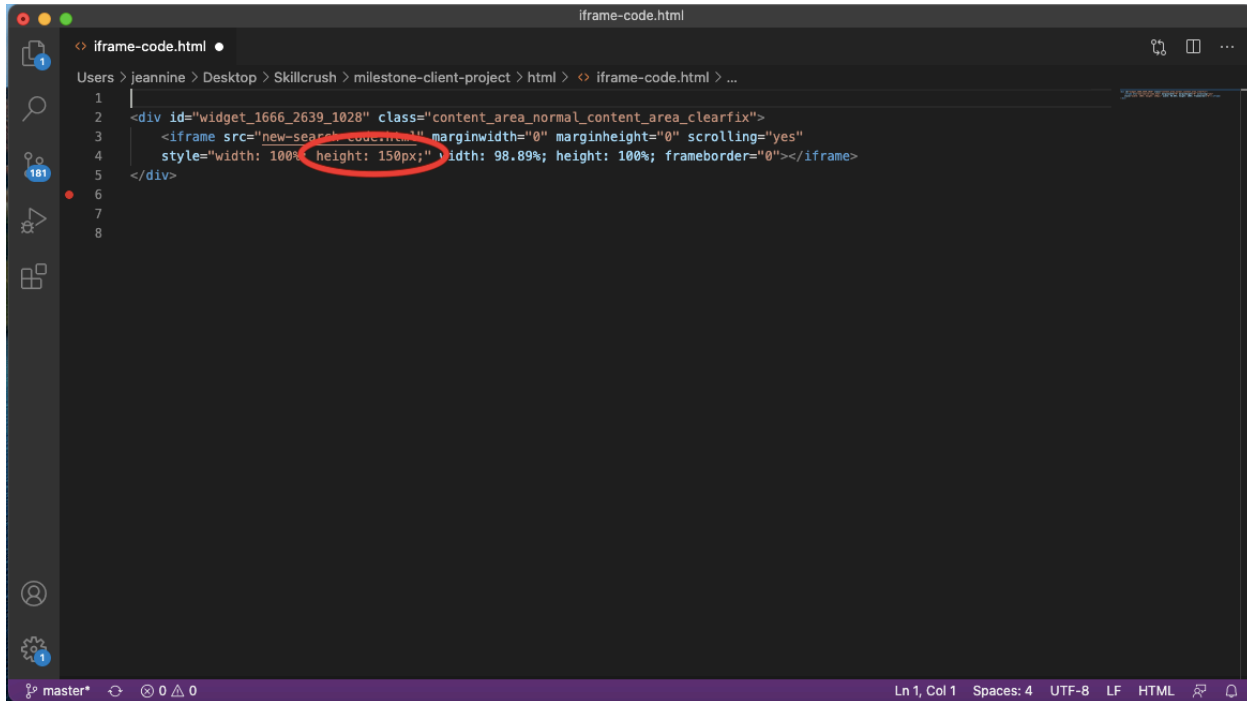

A screenshot of a code editor window titled 'iframe-code.html'. The editor shows the same HTML code as the previous screenshot, but the `src` attribute in the `<iframe>` tag is circled in red. The code is:

```
1 <div id="widget_1666_2639_1028" class="content_area_normal_content_area_clearfix">
2   <iframe src="new-search-code.html" marginwidth="0" marginheight="0" scrolling="yes"
3     style="width: 100%; height: 150px; width: 98.89%; height: 100%; frameborder="0"></iframe>
4 </div>
5
6
7
8
```

The status bar at the bottom indicates 'Ln 1, Col 1', 'Spaces: 4', 'UTF-8', 'LF', and 'HTML'.

7. Right now, you have the width of the iframe set to 37px. This is only tall enough for the search field. The height of the full box you are installing is 150px. Change “height: 37px;” to be “height: 150px” OR you could also try changing this height to be 100%. This had the same effect on my end as 150px but I don’t know how it will impact the rest of your code. If this number is smaller than 150px, the whole box won’t display, you will see a scroll bar inside the iframe. Also, the iframe width is currently set at 103%. This might or might not introduce a horizontal scroll bar on your page when this search box is installed. If this happens, reduce the width from 103% to 100%.

```
1 |
2 <div id="widget_1666_2639_1028" class="content_area_normal_content_area_clearfix">
3   <iframe src="new-search-code-view.html" marginwidth="0" marginheight="0" scrolling="yes"
4     style="width: 100%; height: 150px; width: 98.89%; height: 100%; frameborder="0"></iframe>
5 </div>
6
7
8
```

7. See how it looks and test on the website. It should look just like the screen shot below and nest nicely into the page, but if it doesn’t, let me know! I’m happy to help troubleshoot.
